Alfido Tech — Employee Attrition Business Insights

Leadership report based on the supplied employee attrition dataset

Scope: 1,029 employee records across 35 fields. The observed attrition rate is **17.1%**. The raw file contains **268** missing cells and no duplicate rows.

> **Executive takeaway:** Attrition is concentrated in identifiable employee groups rather than being evenly distributed. Overtime, early tenure, younger employees, selected job roles and frequent travel show the clearest differences in observed attrition rates.

Executive Summary

1. Attack overtime hotspots first. Employees reporting overtime have a 33.2% attrition rate versus 10.5% without overtime. Use workload and staffing diagnostics at team/role level before adding broad retention programs.

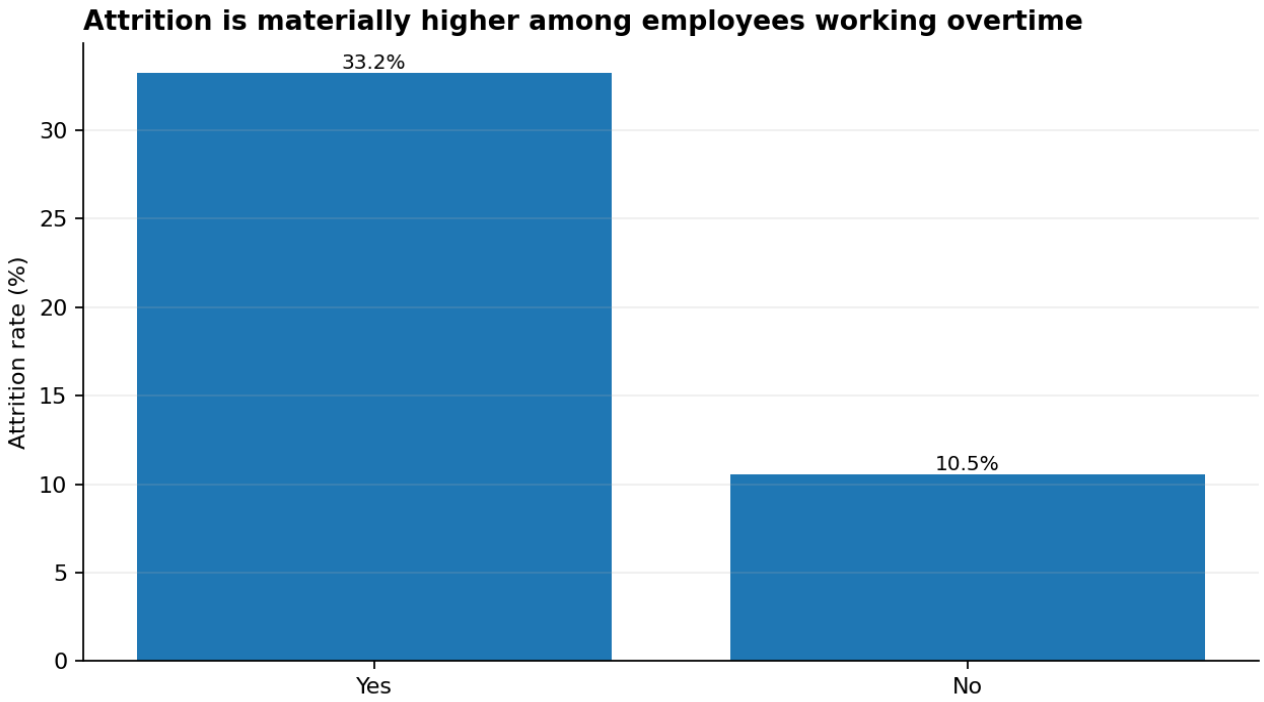

2. Redesign the first-year employee experience. Employees with 0–1 years at the company show a 37.8% attrition rate versus 6.9% among those with 11+ years. Strengthen onboarding, manager check-ins, mentoring and role clarity.

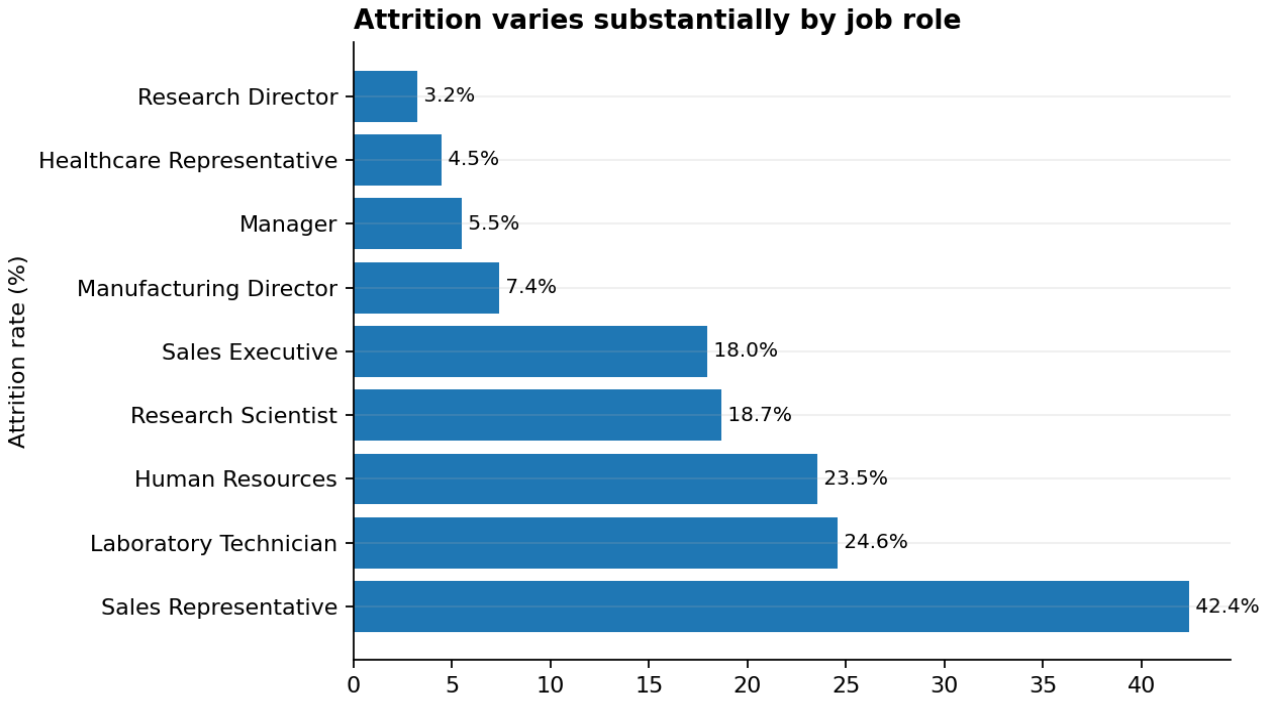

3. Build a focused early-career retention track. The 18–24 group has a 40.3% observed attrition rate. Review career visibility, learning pathways, manager support and expectations for newer employees.

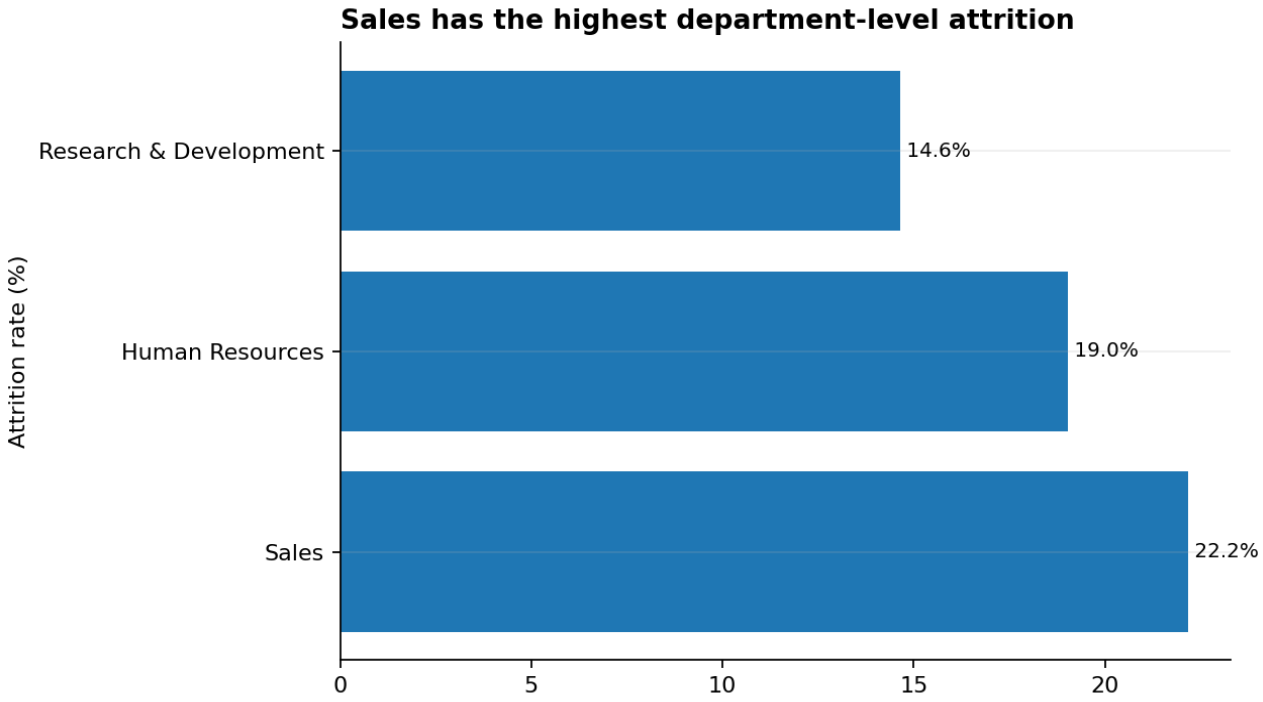

4. Investigate high-risk roles, especially Sales Representative. This role shows 42.4% attrition in the sample. Leadership should validate workload, targets, incentive design, travel and manager-level differences before changing policy.

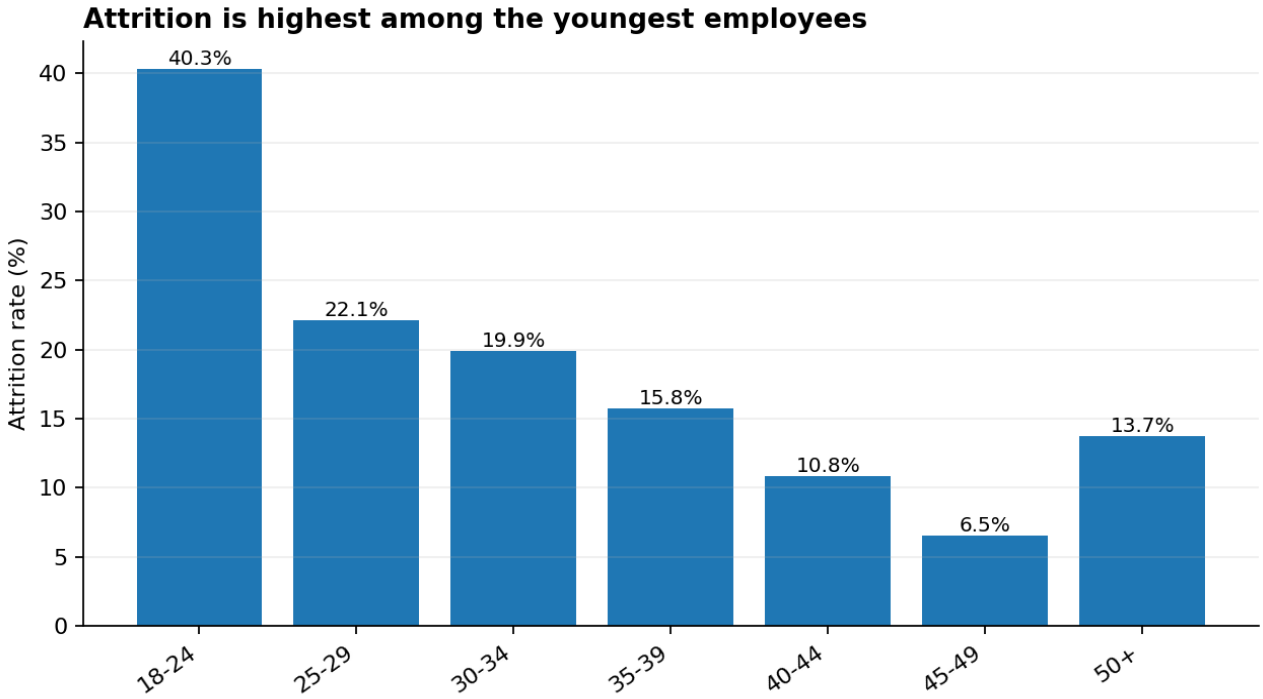

5. Review travel and satisfaction pressure points. Frequent travelers show 24.6% attrition, while employees with the lowest job-satisfaction rating show 24.7%. Segment these issues by team and manager to target interventions precisely.

1. Workforce Risk Signals

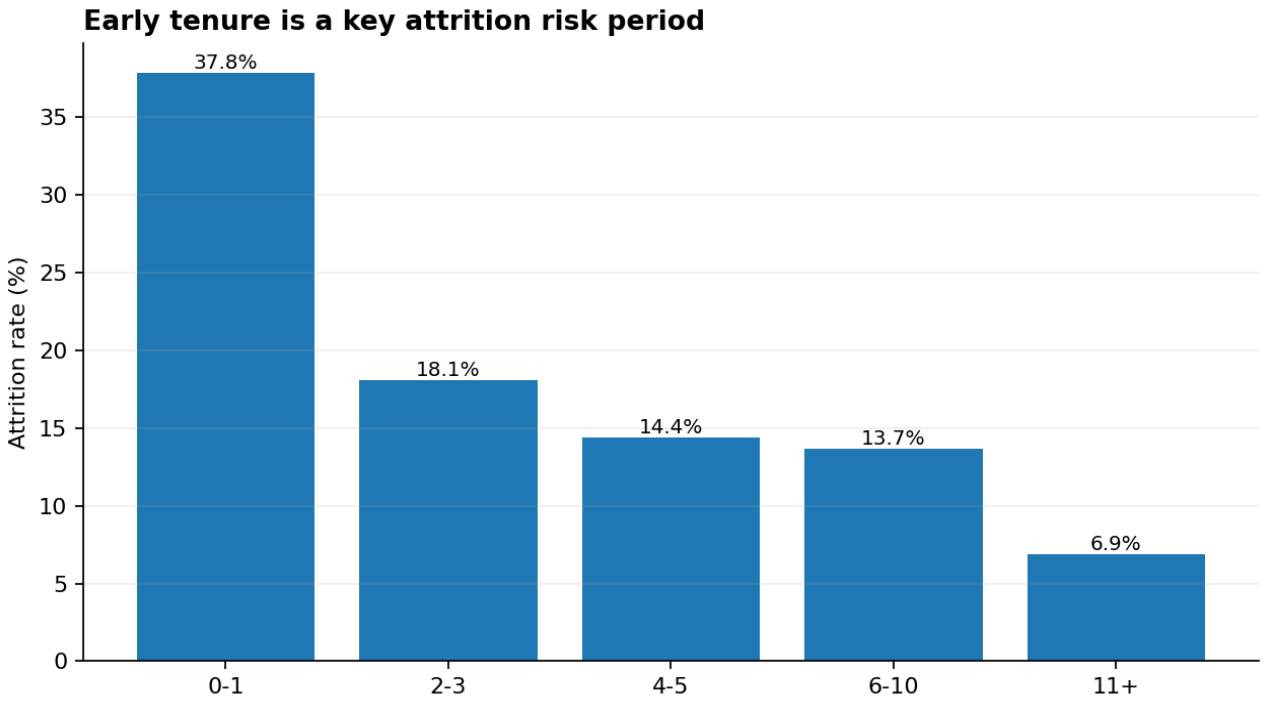

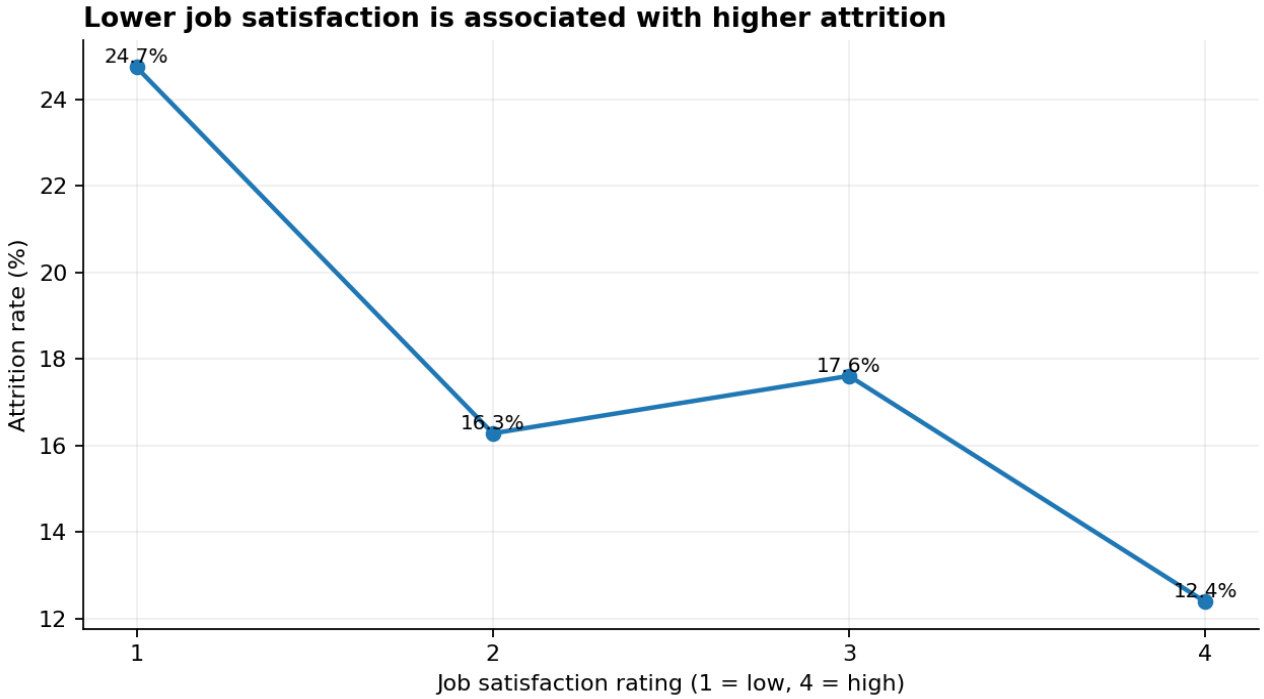

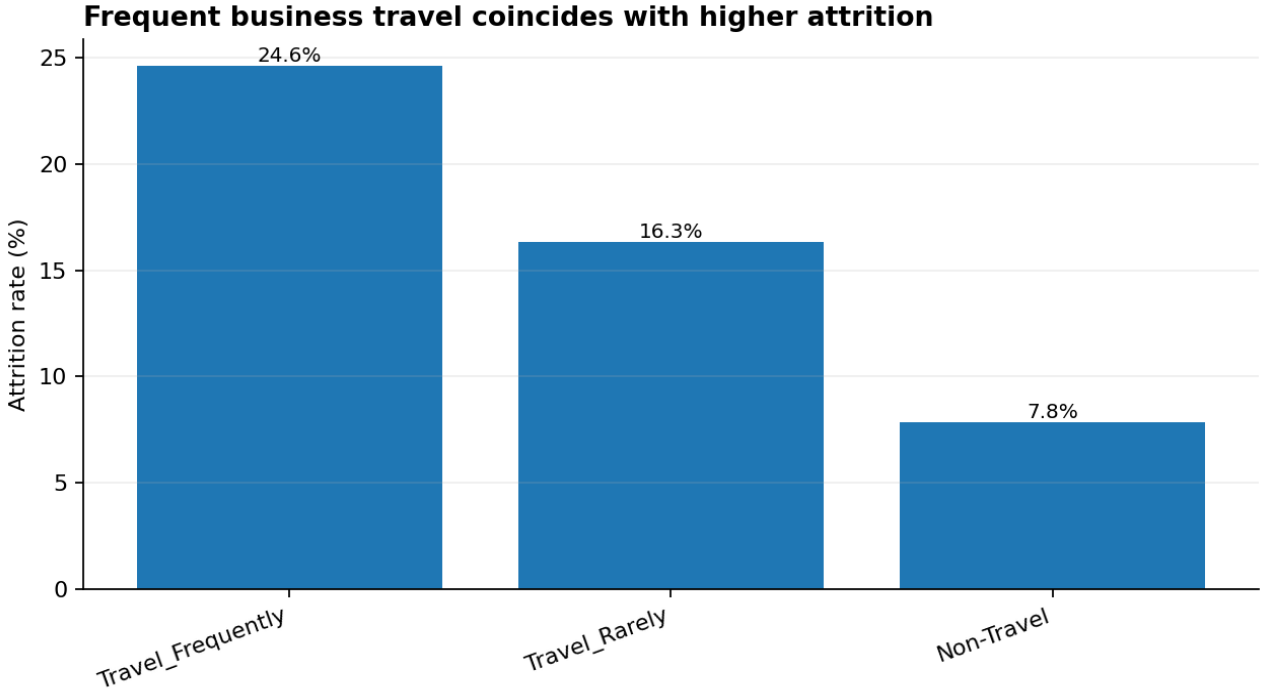

Sales has the highest department-level attrition

3. Supporting Data Tables

Overtime

Overtime	Employees	Attrition rate
Yes	298	33.2%
No	731	10.5%

Job role

Job role	Employees	Attrition rate
Sales Representative	66	42.4%
Laboratory Technician	179	24.6%
Human Resources	34	23.5%
Research Scientist	214	18.7%
Sales Executive	217	18.0%
Manufacturing Director	95	7.4%
Manager	73	5.5%
Healthcare Representative	89	4.5%
Research Director	62	3.2%

Tenure

Tenure	Employees	Attrition rate
0-1	156	37.8%
2-3	177	18.1%
4-5	222	14.4%
6-10	300	13.7%
11+	174	6.9%

4. Prioritized Leadership Actions

Priority	Segment	Employees	Attrition	Recommended action
1	Overtime = Yes	298	33.2%	Review workload, staffing and overtime hotspots; prioritize retention conversations
2	Tenure = 0–1 years	156	37.8%	Strengthen onboarding, manager check-ins and early-career support.
3	Age = 18–24	72	40.3%	Build early-career development, mentoring and realistic career-path visibility.
4	Sales Representative	66	42.4%	Examine target pressure, workload, incentives and manager support in the role.
5	Travel = Frequently	199	24.6%	Review travel burden, scheduling flexibility and recovery time.

Assumptions & Data Quality

• The analysis uses all 1,029 records. No duplicate rows were found.

• The raw dataset contains 268 missing cells: Age (136), DistanceFromHome (95), DailyRate (27), and small numbers in several categorical fields.

• For analysis, numeric missing values were median-imputed and categorical missing values were filled with the mode. This is a pragmatic EDA treatment, not a claim about the true underlying values.

• Results describe associations in this dataset. They should not be interpreted as causal estimates.

• Observed attrition rates can be affected by sample composition and do not establish future attrition probabilities.

• Leadership should validate the highest-risk segments with manager/team-level data, workload measures, compensation, exit reasons and time-based attrition history before implementing policy changes.

Prepared from the employee_attrition dataset supplied for analysis. Detailed cleaned data, raw data, supporting tables and assumptions are included in the accompanying Excel workbook.
